College

It doesn't recognize two values next to each other as a multiplication; we always need to use an asterisk (*).

Maxima treats e like any other variable: a , b , c , d , e , f . To get the constant, we need to use `%e`. Similarly, we would need to use `%pi` and `%i` to get those constants.

Einführung in Maxima

Maxima accepts real and complex numbers. Real numbers in Maxima can be integers, rationals, such as $3/5$, or floating-point numbers, for instance, 2.56 and $25.6e-1$, which is a short notation for 25.6×10^{-1} . Irrational numbers, such as $\text{sqrt}(2)$ (square root of

Where To Download Maxima Tutorial

2) or $\log(2)$ (natural logarithm of 2) are left in that form, without being approximated by floating-point numbers, and later calculations, such as $\sqrt{2}^2$ or $\exp(\log(2))$ will lead to the exact result 2.
