Periodic Chart With Charges

This periodic table with charges is a useful way to keep track of the most common oxidation numbers for each element. Each element square contains all 118 of elements with the element number, symbol, name, atomic mass, and most common oxidation number. The different colors correspond to the different element groups with a key along the bottom.

Periodic Table with Charges - 118 Elements

This is a chart of the most common charges for atoms of the chemical elements. You can use this chart to predict whether or not an atom can bond with another atom. The charge on an atom is related to its valence electrons or oxidation state. An atom of an element is most stable when its outer electron shell is completely filled or half-filled.
