3.4.1.2 Lab - Using Wireshark to View Network Traffic Answers

Wireshark is decoding some of these bits in the OUI (Organizationally Unique Identifier) portion of the address to tell us the vendor of the NIC, e.g., Dell for the source address. • There is a Type field. For the ping messages, the Ethernet type is IP, meaning the Ethernet payload carries an IP packet.

Lab Exercise - Ethernet

Open the ethernet-ethereal-trace-1 trace file in <http://gaia.cs.umass.edu/wireshark-labs/wireshark-traces.zip>. The first and second ARP packets in this trace correspond to an ARP request sent by the computer running Wireshark, and the ARP reply sent to the computer running Wireshark by the computer with the ARP-requested Ethernet address.

Solution to Wireshark Lab: Ethernet and ARP

Wireshark Lab: Ethernet & ARP SOLUTION Supplement to Computer Networking: A Top-Down Approach, 7th ed., J.F. Kurose and K.W. Ross. ... Where in the ARP message does the "answer" to the earlier ARP request appear - the IP address of the machine having the Ethernet address whose

Wireshark Ethernet ARP SOLUTION v7 - USP

• Since this lab is about Ethernet and ARP, we're not interested in IP or higher-layer protocols. So let's change Wireshark's "listing of captured packets" window so that it shows information only about protocols below IP. To have Wireshark do this, select Analyze->Enabled Protocols. Then uncheck the IP box and select OK.

Wireshark Lab: Ethernet and ARP

1.Start up Wireshark and begin packet capture (Capture->Start) and then press OK on the Wireshark Packet Capture Options screen 2. If you are using a Windows platform, start up pingplotter and enter the name of a target destination in the "Address to Trace Window."
